Introduction

The academic communication system revolutionizes education, replacing traditional methods with advanced features for real-time communication, attendance tracking, result distribution, and collaborative project registration. It serves as a centralized solution for managing student-related information, enhancing administrative processes, and creating an enriched learning environment. This technology aims to empower students, streamline administrative tasks, and foster seamless communication. With administrative control, efficient attendance tracking, targeted announcements, and interactive communication channels, the system ensures a dynamic and collaborative academic ecosystem.

PROBLEM DEFINITION

In modern educational institutions, effective communication and streamlined administrative processes are crucial for enhancing academic productivity and student engagement. However, traditional methods of managing academic activities, such as attendance tracking, announcement dissemination, lecture and assignment distribution, graduation project registration, and communication between faculty and students, often rely on manual processes and multiple fragmented systems. This can lead to inefficiencies, errors in data management, and delayed communication, impacting the overall educational experience.

Challenges

01

Manual Processes

Current methods for tracking attendance, distributing announcements, and managing academic activities are often time-consuming and prone to errors.

02

Management

Handling and organizing large volumes of data related to lectures, assignments, and student records is complex and requires robust systems.

03

Integration Issues

Integrating different systems and platforms for various academic activities can be challenging and may lead to compatibility issues.

Challenges_{cont.}

04

Security Concerns

Ensuring the security and confidentiality of academic and student data is crucial.

05

Communication Gaps

There is a need to improve communication channels between faculty and students, ensuring timely updates and feedback.

System Analysis & Design

The Academic Communication System is strategically designed to facilitate efficient interaction and collaboration between faculty and students within educational institutions. This analysis aims to dissect the key components of the system architecture, emphasizing their role in optimizing communication, streamlining administrative workflows, and enhancing the overall learning experience.

Objectives

The objective of this project is to develop an Academic Communication System that addresses these challenges by providing a unified platform for managing and enhancing various academic activities. The system aims to automate routine administrative tasks, improve communication channels between faculty and students, and ensure efficient data management and security.

Methodologies

01

Requirement Analysis

- Conducted extensive requirements gathering sessions with stakeholders, including faculty members, students, and administrative staff, to identify challenges and requirements.
- Documented detailed functional and non-functional requirements based on the analysis.

02

System Design

- Designed the system architecture using a layered approach to ensure scalability and maintainability.
- Developed wireframes and prototypes to visualize UI& UX design.
- Designed the database schema to efficiently manage large volumes of academic data.

Methodologies_{cont.}

Technological Stack

- Selected technologies based on the system requirements and scalability needs.
- Integrated third-party APIs for functionalities such as email alerts.

03

Development

- Implemented core features including automated attendance tracking, announcement distribution, lecture and assignment management, graduation project registration, and real-time communication channels.

04

Methodologies_{cont.}

05

Testing

- Conducted rigorous testing, including unit testing, integration testing, and system testing, to ensure the functionality, performance, and security of the system.
- Collaborated closely with end-users to conduct user acceptance testing (UAT) and gather feedback for further improvements.

06

Deployment

- Deployed the system in a staged environment using Docker containers to facilitate easy deployment and scaling.
- Monitored the system post-deployment to ensure stability and performance under varying loads.

Methodologies_{cont.}

Documentation & Training

- Prepared comprehensive technical documentation including system architecture, API documentation, and user manuals.
- Conducted training sessions for faculty, administrative staff, and students to familiarize them with the new system and its functionalities.

07

Evaluation & Iteration

- Evaluated the system's effectiveness in improving academic productivity and communication based on user feedback and performance metrics.
- Iteratively improved the system based on evaluation results and emerging requirements.

08

TOOLS & TECHNOLOGIES

Front-End Flutter

A versatile solution unifying natively compiled applications across platforms with expressive UI capabilities.

Back-End Dart

The foundational language within Flutter, fostering seamless integration and efficiency.

Back-End Docker

The foundational language within Flutter, fostering seamless integration and efficiency.

Data Base SQL queries

Ensuring security and coherence, SQL databases facilitate organized storage and retrieval of academic information.

Data Base PostgreSQL

PostgreSQL is an advanced, enterprise-class open-source relational database that supports both SQL (relational) and JSON (non-relational) querying.

TOOLS & TECHNOLOGIES

Back-End SupaBase

Supabase is an open-source backend-as-a-service (BaaS) platform designed to simplify the creation and management of modern web and mobile

UI / UX Figma

Figma serves as a collaborative tool, empowering our team to create visually compelling and intuitive interfaces.

UI Design

01

splash screen

A splash screen is a graphical element that appears briefly when a software application is launched

02

login screen

A login screen is a graphical interface for users to input credentials, granting access to protected resources upon authentication.

03

forget screen

A forget password screen is a user interface element that prompts user to reset their forgotten password by providing their email address

It shows doctors upcoming lectures and meetings, with notifications for new messages and urgent updates, ensuring efficient management of academic education.

Announcement

It enables faculty to efficiently communicate important information such as quiz creation, assignment releases, and event notifications to students, fostering effective engagement within the academic community.

Home screen

it is the first screen that appears after the user logs in

The Home screen features an Announcements section for critical updates .

The popup displays focused information about a single announcement.

The popup displays a single announcement from the list

The "show All" screen displays a concise list of all announcements,

Faculty members use the Classwork Screen to upload lecture materials, assignments, results, and quizzes, ensuring easy access to course resources for students and streamlined academic administration.

Registered Courses Screen

The Registered Courses screen provides students with a centralized view of the courses they've enrolled in for the current semester.

Classwork Screen

The Classwork screen offers students a comprehensive suite of options tailored to their course needs:

Material

01

Lecture Material screen

presents a comprehensive collection of educational resources for a specific subject.

02

Section Material screen

offers students a centralized repository of educational materials specific to each course section.

Assignment

01 Assignment screen

The Assignment screen centralizes all tasks for students.

02 Assignment screen

The Upload Assignment screen allows students to upload their completed assignments a

Result screen

"display all academic outcomes for a specific subject, including grades ,and assessment results for quizzes, assignments and exams ."

Graduation Project Team

The Project screen enables collaborative work on group projects:

Create Team screen : Students form project teams by specifying the project's name, description, and inviting others to join.

- **Join Team:** Students can join existing teams by searching for projects or browsing available teams.

Graduation project

It enables faculty members to review and manage student project teams and their proposals. Professors can view the details of each team's project idea and decide whether to approve it. This streamlined process facilitates efficient evaluation and selection of graduation projects, ensuring that both students and faculty are aligned on project goals and expectations.

Attendance

The Attendance Screen for faculty members simplifies the process of taking and managing student attendance. It automatically generates a unique QR code for each class session, which students can scan to check in. This method ensures secure and accurate recording of attendance.

Classwork Screen

attendance screen

"when student scan the QR code, the mobile app instantly registers their attendance , providing a seamless and efficient experience ."

Faculty can access detailed attendance records at any time and export the data for further analysis. This feature saves time and effort, ensures precise record-keeping, and provides a convenient solution for both students and faculty.

Chat Screen

The Chat Screen facilitates communication between students and teaching staff or support teams.

It facilitates communication between faculty members and their students. This feature allows for secure and private interactions without the need for faculty to share their personal contact information. It ensures that all communications are confined to academic purposes, providing a dedicated platform for students to connect with their teaching staff.

settings

The Settings screen offers users various options to customize their experience:

Settings

It allows teaching staff to manage profiles, change passwords securely, and view recent notification. It ensures personalization and security in managing their account information.

Doctor Schedule View

Future work

Data Storage Management

Fixed storage space for doctors with options to request more, pending approval.

Attendance Security

Biometric authentication (fingerprint/face ID) and geo-fencing for attendance.

Platform Versions

Mobile app for doctors.
Desktop app for students.

Admin Email Notifications

Bulk email functionality with templates and scheduling for admins.

Future work_{cont.}

05

Online Meetings

- Schedule and conduct online meetings with video, screen sharing, and recording.
- Calendar integration for scheduling and notifications.

06

Exam and Anti-Cheating

Create, distribute, and grade exams with anti-cheating measures (browser lockdown, AI proctoring, random question order).

Future work_{cont.}

07

Admin Dashboard

Comprehensive dashboard for monitoring, user management, storage approvals, and meeting/exam oversight.

08

AI Chatbot

AI chatbot in student app for study assistance, continuously updated for accuracy.

Conclusion

The Conclusion Of This Thesis

In conclusion, the Academic Communication System represents a significant advancement in enhancing administrative efficiency and communication within educational institutions. By automating routine tasks such as attendance tracking, announcement dissemination, and assignment management, the system reduces administrative burden and minimizes errors. Real-time communication channels between faculty and students foster collaboration and timely feedback, enriching the learning experience.

Moving forward, continuous evaluation and feedback will drive further enhancements and refinements to meet the evolving needs of our stakeholders. We are confident that the Academic Communication System will not only streamline operations but also contribute to improved academic productivity and student engagement.
